Andrew Willner head of the New York Centre for Post Carbon Logistics, future sail trading advocate.

Steven Woods IWSA assistant editor with an extensive research portfolio specialising in US sail transport. An important supporter. steven.woods@student.prescott.edu

Pete Goss MBE "Monet's paintings offer a window into a past where windmills ground our corn and pumped water to reclaim much of the Netherlands as we know it. Sails carried cargo across the oceans and even populated Australia. These echo's from the past are coming back as we reinvigorate our recognition of this abundant clean and free energy.

Just as wind mills have morphed into the wind turbines that grace our lands so will we start to see innovative sailing ships elbow their way into the territory of modern day shipping. It's time to stop polluting the wind and to start harnessing it.

Go Sail Cargo offer a menu of versatile emission free ships that incorporate existing technologies to achieve sustainable marine transport.

Having looked at their motives and studied their designs I like the cut of their Jib."
